ER and updated NR: mean, $\mu \pm \sigma$, and 10%–90% bands

ER: 20-phd S1c slices

NR: flat-spectrum endpoint 500 keVnr; 10-phd S1c slices

$\log_{10}(S2_c/\mathrm{phd})$

This work: slice mean
Published mean
This work: $\mu \pm \sigma$
This work: q10 / q90
Published q10 / q90

Full-width ratio

2σ / published width
(q90 - q10) / published width

S1c [phd]

No empirical scaling. Same MC for $\mu \pm \sigma$ and q10/q90; $\sigma = \mathrm{std}[\log_{10}(S2_c/\mathrm{phd})]$ (ddof=0). Published boundaries retain their q10/q90 labels.
